

Guide

1- Download Python :

<https://www.python.org/ftp/python/3.10.4/python-3.10.4-amd64.exe>

2- On running the **downloaded installer**, you will get this window. Click on '**Install Now**'.

3- After finishing the installation, it is recommended to choose the option to **disable path length to avoid any problems** with your Python installation.

4- Now that Python is installed, you should head over to our terminal or command prompt from where you can install Pandas. So go to your search bar on your desktop and **search for cmd**. An application called **Command prompt** should show up. Click to start it.

5- Type in the command "**pip install pandas**".

6- From file « **Transcripteur** » run **main.py**
